# **FlashID Community Support Program**

## **How it Works**

Basically, the operation of the program is simple, and in two parts.

### **1 Passive**

In the passive mode, all that is necessary is for the organisation, branch or club, etc. to sign a straightforward Memorandum of Understanding, which sets out in plain English the rights and obligations of each party.

We then add that entity to the Community Support section of our website, either as a new page, for an organisation, or as a drop-down option for a club or branch that is affiliated with an organisation that is already participating.

Anybody who orders a flashID device (Classic, Card or Watch) through this page earns the designated club, etc. a donation of \$5 from FlashID.

It's as easy as that, with no stock and no accounting, other than to receive the money.

### **2 Active**

Here, we provide an opportunity to earn much more, through actively promoting flashID to members and supporters by carrying stocks of flashID products for resale.

However, it is not necessary to tie up your funds in inventory, as we provide product through the Community Support Program in quantities as small as ten units, which provide the opportunity for you to buy at a reduced price and sell at retail. The more you buy, the greater the margin.

To find out more about the Active Participation programme, it is necessary for the president and secretary of your organisation to sign a straightforward Non-Disclosure Agreement in addition to the Memorandum of Understanding, as outlined above. Once we have received these we can then provide full details of our very generous pricing plan.

## **What Next?**

Just email us or write us a letter on your organisation's letterhead, with relevant contact details and we'll send the documentation by return email.
